

# FPT-1

## CPLD/FPGA Logic Circuit Design Experimental Kit

### Introduction

In the past, each engineers themselves need to design their own circuit board, which then need a certain amount of universal bread boards and logic components to do trials and errors, all this not only wastes time, also expenses would increase. Now an electronic engineer can finish circuit designs easily by using CPLD / FPGA, only by a few reformation of the software it can be ready for operations. Leap Electronic have considered for the beginners' needs, therefore we have invented FPT-1 combining the CPLD or FPGA for educational purposes. The FPT-1 avoids the soldering issues between the circuits and cable lines.

- Standard Accessories**  
 FPT-1 Main board.....x1
- Optional Accessories**  
 DC 9V/500mA power adaptor .....x1  
 25-pin printer cable.....x1

### Features

- Use CPLD/FPGA software and hardware to design Logic IC, in order to replace complicated hardware design of TTL/CMOS.
- Capable in using Circuit Graphic and digital hardware descriptive syntax (VHDL, ABEL, and AHDL) to develop circuits, and directly download from original manufacturer's software via printer port.
- Modulized design: user can choose ALTERA or XILINX chipboard module.
- Avoid the soldering issues between the circuits and cable lines.

### Chip board specification

Device supported	<b>ALTERA</b> EPF10K10TC144 (TQFP144 pin)	<b>XILINX</b> XCS10TQ144(TQFP144 pin)
Chip board model	<b>ALTERA</b> FPT-EPF10K10TC144	<b>XILINX</b> FPT-XCS10TQ144

1. 8 x 2 LED shown output.
2. 8 x 2 Logical input toggle.
3. 4 pulse keystrokes producer (two positive pulses:two negative pulses).
4. 6 digits and 7 nodes monitor.
5. Own red main power guiding lights.
6. Within 10MHz oscillator.
7. Own main power switch to exchange adaptor with Extend Power Pin.
8. 25pin D Type Connector (Printer Port Download FPGA).
9. Use DC 9V adaptor or Extend Power Pin provided for user. Specification: DC 5V.
10. Support ALTERA MAX +Plus II Baseline and XILINX Foundation's development system.
11. Not use expanded area I/O Pin, provided user definition use.

### PC System Requirement

Operating System	Windows 98/2000/XP/Vista 32bits
------------------	---------------------------------

### Application Program Range

1. Fundamental logic
2. Digital circuit design
3. Digital system design
4. Microprocessor principle
5. CPLD/FPGA chip design

### Test Content

Combined logic design, simulation and test	Sequential logic circuit design simulation and test	Thematic Application Test
1. Basic logic	1. Flip-Flop	1. Digital clock
2. Deducer	2. Shift register	2. Counter
3. Decoder	3. Shift counter register	3. Electronic alarm clock
4. Combined logic	4. Synchronized counter	4. Traffic light control
5. Comparator	5. Non-Synchronized counter	5. Electronic dice
6. Multiplexer		6. VHDL/AHDL design
7. Adder		7. Random design of expanded I/O Pin
8. Compiler		
9. Demultiplexer
