The PLA Series (PC based logic analyzers), provide digital software and hardware designers the ability to readily capture the complex signals in a digital environment that require analysis and/or debugging. Furthermore, their compact size and USB connectivity to a laptop makes them an ideal solution for field applications.

Features

- Internal(asynchronous) and External (synchronous) capture : Offer a more convenient environment for engineers.
- The timing of each cursor mark to the trigger can be shown.
- Provide binary code and hexadecimal List mode (State) display.
- Able to save the measuring data and waveform completely.
- Offers I²C, SPI, UART etc. signal decode function.
- Provide various signal trigger and capture: Pattern / Edge / AND / OR, 4 kinds of trigger modes.
- Pre-trigger, 3 level Post-trigger and continued-trigger functions make user operate more easily.
- Bus analysis and glitch capture function.
- 256K Bytes / 2M Bytes long memory depth; each CH memory depth is up to 128Kbits / 512Kbits
- Able to set the sample rate size by users, which avoid capturing time too long.
- Provide “Trigger Counter” and “Pulse Width Trigger” function.
- Provide High-speed Zoom In / Zoom Out function.
- Smart software provides text file for saving the Binary Code of waveform.
- Connect to PC which able let the user to view, save, analyze and printout the data
- No need extra power, just connect to the USB.
